

## **REGENERATIVE MEDICINE**

## **AESTHETIC MEDICINE**

## **TRAININGS**

Beautyeuropa.eu is a company that sells medical devices, provides knowledge concerning regenerative and aesthetic medicine, develops innovative products and takes care of the progress their clients make in the fields where they want to strive for perfection.

The company aims at supplying the market with certified, high-quality medical products at the lowest prices. Our vast experience allows us to manufacture products under our own brand, as well as deliver the highest-quality products from different parts of the world.

Our specially designed internet platform [www.beautyeuropa.eu](http://www.beautyeuropa.eu) intends to fulfil the expectations of the people looking for safe and efficient products, and also for the ones willing to improve their workshop and exchange experiences. It is a place where - in the future - patients will be able to find their favourite clinic, purchase products recommended by professionals and gain knowledge concerning new trends and possibilities offered by medicine.

For Beautyeuropa.eu, beauty has a multidimensional character. It is not only the physical beauty but, above all, health and well-being that allow us to feel beautiful.

# SETS AND TEST TUBES

## FOR OBTAINING PLASMA AND PLATELET-RICH FIBRIN

### PRP 1

#### MESOTHERAPY WITH PLATELET-RICH PLASMA

A set for obtaining platelet-rich plasma PRP 1. Ideal set, distinguished by the high quality and amount of plasma obtained from the patient's own blood. One test tube allows us to obtain as much as 5ml of PRP, which is enough for one full treatment area, such as face, neck, décolleté area or hands.

medicine of the future  
elixir of youth  
tissue engineering  
autologous dressing

### PRP 2

#### DEEP INJECTIONS

Advanced method of obtaining platelet-rich plasma of next generation, without the use of separating gel. The lack of the barrier formed by gel allows us to use innovative procedures of centrifugation, as a result of which platelet-rich plasma with many times higher concentration of platelets is obtained, which increases the regenerative capability.

**It is possible to purchase only the test tubes without the whole sets**

All products are certified medical devices and they bear the CE 1370 mark - a guarantee of safety of the performed treatment.

## PRF BASIC

### „ELIXIR OF YOUTH“

The use of a unique production technology of test tubes allows us to obtain from 1.5 to 4 ml of platelet-rich fibrin for injection (IPRF, SPRF), which maintains its liquid form up to 40 minutes, which enables an accurate and precise performance of the treatment by the doctor. We obtain the connective tissue material in a liquid form, allowing us to make subcutaneous injections and create temporary filling.

## PRF ADVANCED

### AUTOLOGOUS DRESSING

The only certified set in Europe, created to obtain autologous dressings from platelet-rich fibrin APRF. Due to the unique production of test tubes from the set, we are able to obtain a fibrin clot immediately upon completion of the centrifugation procedure. The connective tissue material in a solid form enables the creation of autologous dressings in a form of membranes, clots or a "sticky bone".

## PRP + PRF

### TWO TECHNOLOGIES IN ONE TREATMENT

A set for obtaining next-generation platelet-rich plasma and platelet-rich fibrin for injections IPRF/SPRF. One treatment combines two technologies: platelet-rich fibrin and plasma of next generation. A lack of barrier in a form of gel allows to obtain platelet-rich plasma with a higher concentration of platelets. Together with platelet-rich fibrin they form a treatment with unique regenerative potential.

## PRF BOX

An essential surgical tool made of stainless steel for APRF platelet-rich fibrin processing.

It enables the formation of:

- ▶ clots
- ▶ membranes
- ▶ sticky bone

## Dr. REGEN

### REGENERATIVE CREAM FOR SKIN REBUILDING

Tested components enhance the skin condition and have a healing effect by quick tissue regeneration.

The cream:

- ▶ quickly regenerates the skin after the treatment
- ▶ reduces skin damages
- ▶ has an anti-inflammatory effect
- ▶ prevents moisture loss
- ▶ improves wound healing
- ▶ strengthens skin barrier
- ▶ prevents irritation

## CENTURION PRO-PRP S

The smallest member of PRO-PRP family dedicated to obtaining platelet-rich plasma and platelet-rich fibrin. It is equipped with a rotor intended for sterilisation in autoclave and a chamber made of acid-resistant steel. It is also characterised by uncommonly quiet work and unique stability while centrifuging. Centurion centrifuges are premium devices for the most demanding users.

### TECHNICAL DATA

- fixed-angle rotor, 8 x 15 ml capacity
- induction motor (brushless)
- maximum rotation / RCF - 6000 rpm/3500 g
- smooth speed adjustment from 500 to 6000 rpm
- 10 settings of braking and accelerating each
- control from RCF and rotation levels
- correct balance detection
- self-diagnosis function
- programmer
- PULSE function
- 36-month long warranty

## NEUATION IFUGE D06

Premium Edition - is a special version, optimised to obtain platelet-rich plasma and platelet-rich fibrin. Unlike its standard version, it has a regulation of speed every 10 revolutions per minute, which allows for a very accurate mirroring of existing centrifuging procedures. A smooth-braking function in the last phase of centrifuging is particularly important in the process of obtaining the platelet-rich fibrin for injections.

### TECHNICAL DATA

- fixed-angle rotor, 6 x 15 ml capacity
- induction motor (brushless)
- maximum centrifuging speed - 6500 rpm
- maximum RCF 3684 g
- smooth speed adjustment 500-6000 rpm, with regulation every 10 rpm
- time setting from 1 to 30 minutes and continuous operation mode
- noise level
- built-in detection of correct balance

## ZENITHLAB 80-2C

A centrifuge with induction motor intended for obtaining platelet-rich plasma and platelet-rich fibrin, as well as for clinical and laboratory testing. Exceptionally easy to operate. The device has a smooth regulation of speed every 10 rpm and a digital timer to set time from 1 to 99 minutes. It allows for centrifugation of 130 mm-long test tubes.

### TECHNICAL DATA

- rotor for standard tubes of 130 mm maximum
- induction motor (brushless)
- maximum rotation 4000 rpm
- maximum RCF 2325 g
- smooth speed adjustment from 100 to 4000 rpm
- time setting from 1 to 99 minutes
- mechanical lid-blocking
- safety contractor
- two digital displays

## FILLUS

### HIALURONIC ACID

The line of FILLUS products is a next generation of HA acids, specially designed for professionals, ensuring complex solutions in the skin anti-aging therapy. Their main purpose is to improve skin moisture, elasticity and flexibility.

Fillus preparations are characterised by the highest level of purification and biocompatibility. Due to the use of the Multi Group Chain MGC method in their production, the Fillus acid particles reach optimal viscosity which allows for the easy shape modelling.

- CE 2195 medical certificate
- Endotoxins below 0.08 EU/g
- Special process of production - high viscosity due to the Multi Group Chain (MGC) method
- High sustainability - perfect integrity and ability to form (Easy Molding)
- High level of cross-linking - accurate connecting of particles due to the use of DVS, improved durability and effectiveness
- Residual presence of DVS cross-linker - untraceable
- Excellent effect - combined advantages of monophasic viscosity and biphasic elasticity.

# AESTHETIC MEDICINE

## PDO THREADS

### THREAD W SERIES

The threads allow for the performance of non-surgical face lifting, as well as face and body contouring. Skin flexibility and smoothing of wrinkles give a visible and lasting effect of rejuvenation. This is because the threads stimulate the synthesis of collagen and elastin, which are responsible for skin density.

After the treatment has been performed, a gradual improvement of the tissue quality begins, the effects of which persist even for a couple of years.

- CE 2292 medical certificate
- Wide selection of absorbable PDO threads: Mono, Twin and COG
- Wide selection of the needle or cannula size and thread length
- Short time of application, immediate effect
- Biocompatibility of the material threads are made of
- Attractive training package
- Korean manufacture at the most advantageous price
